

Monitoring and Control Systems (MCS)

Steve Hahn
MCS Meeting
10/05/2004

- So, what's going on with the upgrade?
 - Last week: very successful (thanks, Mark!)
 - VNODE1 - one day
 - Note some windows are now fixed so they come up in right spot
 - VNODE2 - one day
 - Took some work on Mark's part to get Smart Alec to work
 - Had to install Microsoft Access, and import 1998 DB into 2004 version
 - Smart Alec no longer supported by Adaptive, need to look into newer program
 - SOLENOID2 - one day
 - But, no ICICLE - DB group wants ICICLE running and churning out data
 - Marghertia has new client on order

Monitoring and Control Systems (MCS)

➤ Basically, effortless:

- Moving from iFIX 2.2 to iFIX 3.0 much more difficult
 - Currently, iFIX 3.6; need to look into upgrade
- Visual Studio 6.0 to Visual Studio .NET not a problem
 - **Do** recompile and link your packages to see if it works; don't want surprises after shutdown
 - Mary Convery (on CLC1) found had to add some libraries for new include files; just searched on disk
- Much much faster (10X?), both PCs and code

➤ This week:

- COT3 ready to go
- CDFTEMP (Windows 2000 for APACS driver) may need Visual Basic
- SVXIICON probably need to delay until silicon cold
